Professional Summary

- Senior Backend Engineer with 3+ years building **high-throughput Java systems** at scale — **65% latency reduction**, **60% fewer failures**, **40K+ req/day**. Specialised in **microservices**, **distributed systems**, and **performance engineering**. Experienced in end-to-end architecture ownership, technical decision-making, and mentoring. Seeking SSE roles where scalability and reliability are core.

Technical Skills

Languages: Java, JavaScript

Frameworks: Spring, Spring Boot, REST APIs, JPA, JWT, OAuth, Hibernate, Spring Security

Cloud & DevOps: AWS (IAM, VPC), Kubernetes, Docker, Jenkins

Messaging & Caching: Kafka, Kafka Streams, Redis

Database: MySQL, PostgreSQL, DynamoDB, Amazon Redshift

Software Architecture: Microservices, RESTful APIs, Event-Driven Architecture, Async Processing

CS Fundamentals: Data Structures and Algorithms, OOPs, Java Collections, Low-Level Design, High-Level Design Experience

Salescode.AI | Senior Software Engineer (Java, SpringBoot, Kafka, MYSQL, Redis) (Jan 2023 - Jul 2026)

- Led **end-to-end backend engineering** across **3+ production services** for large-scale enterprise clients (Bepensa/Coca-Cola Mexico, Mars Sampling), owning architecture, core development, and production deployments.
- Defined **API contracts** and **service boundaries** for new microservices, collaborating with product and frontend teams to align technical design with business requirements.
- Maintained **100% production stability** across payment, order, and rewards domains under concurrent high-traffic conditions.

Key Projects

Bepensa — Credit Management & Orders (Coca-Cola Mexico)

- Architected Credit Management using the **Saga pattern** for distributed transaction handling, reducing operational failures by **60%** and enabling graceful recovery from partial-failure scenarios.
- Designed **async non-blocking RESTful APIs** over synchronous calls, cutting average response time by **20%** and preventing cascading failures in dependent services.

REWARD SERVICE

- Designed a modular **microservices-based reward system** from scratch, handling **40,000+ requests/day** with high availability and fault isolation.
- Architected a **Redis caching strategy** (TTL + eviction policies), reducing processing latency by **65%** and sustaining throughput under peak traffic.
- Built **real-time anomaly detection** and Slack alerting for the reward pipeline, reducing incident response time by **40%**.

Mars Sampling — Payments & Redemptions

- Integrated **PAYTM** and **Qwikcilver** behind a **unified abstraction layer**, enabling future provider additions without changes to core service logic.
- Resolved **payment race conditions** across a multi-node environment via **distributed locking with Redis**, guaranteeing **idempotent** transaction execution for **10,000+ active users**.

Personal Projects

SpringShield | (SpringBoot, SpringSecurity, JPA, MySql, Maven)

- Designed and built a production-grade **JWT authentication & authorisation** system with **RBAC** and **method-level security**, protecting **10+ REST endpoints**.
- Implemented a full **refresh token lifecycle** — issuance, rotation, and revocation — enabling secure token renewal without re-authentication, reducing repeated login requests by **30%**.
- Engineered **concurrent session handling** with consistent token validation across simultaneous user sessions, with a focus on **correctness and scalability**.

Achievements

- Lead Performer Award — Salescode.AI (July 2023):** recognised for consistently delivering high-impact backend features and driving project execution excellence.
- Best International Project of the Year** — awarded for outstanding engineering quality and on-time delivery of the Bepensa (Coca-Cola Mexico) enterprise project.

Education

DR BC ROY Engineering College

B-TECH Computer Science Engineering GPA: 8.8/10

Jun 2018 – Jul 2022

Durgapur, West Bengal
